

Portable Healthcare Protection Shelter

The Nor E Portable Healthcare Protection Shelter is a quick erect system to protect healthcare and support workers from potential carriers of airborne and contact related bacteria and viruses.

Protective working environment for assessment staff and health care workers.

The filtered, positive pressure shelter ensures examination of the public is safe and efficient

Privacy cubicles where the public can be examined through protective windows using protective arm sleeves.

Quick erect shelter

Protective arm sleeves

- 1 Shelter can be set-up at the entrance of your hospital, a bus/subway terminal or the airport terminal. Set-up time is less than 10 minutes.
- 1 Once erected, the staff working area is over pressured with filtered air to protect health care workers from any possible contamination. The shelter incorporates viewing windows with flexible sleeves to allow direct, gloved contact with the public.
- 1 Individuals enter one of the private cubicles where their temperature can be safely taken and a questionnaire completed.
- 1 Once assessed, the individual is either cleared to proceed or, where symptoms are identified, sent to a negative pressure quarantine shelter for further assessment by the appropriate

1. Unpack Shelter

2. Expand Frames

3. Attach and engage filter

4. Enter shelter
